Remediation Request

BACKGROUND

The Village of Waterford is located in the western portion of Loudoun County between Lovettsville and Paeonian Springs. The Village was a former town incorporated and enlarged by Acts of the Virginia General Assembly in the early and mid-1800s. In 1936, the Town of Waterford was dissolved, and it has remained a Village since. It is a small village that does not typically experience high traffic volumes outside of the peak traffic periods. During the peak periods, major north-south commuting routes to the east and west of the Village of Waterford become extremely congested. To the east is Route 15, a principal arterial connecting Leesburg and the Northern Virginia area with areas north across the Potomac River into Maryland. To the west is Route 287 (Berlin Turnpike), a minor arterial that provides an adjacent Potomac River crossing into Maryland. The intersection of Route 287 at Route 9 (Charles Town Pike), in particular, becomes extremely congested during the peak hours. **Figure 1** shows the Village of Waterford and its surrounding area. One of the few alternative routes to avoid these congested north-south arterials is through the Village of Waterford. Residents are concerned about the safety of the Village with a large cut-through volume entering the town during peak traffic periods.

Previous limited remediation efforts have been made to reduce the speed from 25 MPH to 20 MPH and limit heavy vehicles within the Village of Waterford. Such implemented measures include additional stop signs and trees, a \$200 speeding fine program, and 'Watch for Children' sign installations.

Board Member Initiative

In correspondence dated August 12, 2015, the Waterford Citizens Association (WCA) requested assistance from the Virginia Department of Transportation (VDOT) and Loudoun County to address vehicular speeding and cut-through traffic in the Village of Waterford. On October 15, 2015; the staff from the Department of Transportation and Capital Infrastructure (DTCI) met with representatives of the WCA, the Sheriff's Office, and VDOT to discuss the situation. At this meeting, it was determined that the best approach for addressing the vehicular speeding and cut-through issues would be through VDOT's Residential Cut-Through Traffic Program. The Loudoun County Board of Supervisors, at their December 2, 2015 Business Meeting, directed the County's DTCI to identify the cost of and funding sources for the completion of a traffic study in the Village of Waterford in relation to VDOT's Cut-Through Traffic Program.

JMT was selected to develop this study through the County's on-call services contract and to compile the preliminary information required to initiate a VDOT traffic study. This document includes:

- Supporting data for VDOT's Cut-Through Policy
- Vehicle Speed Analysis

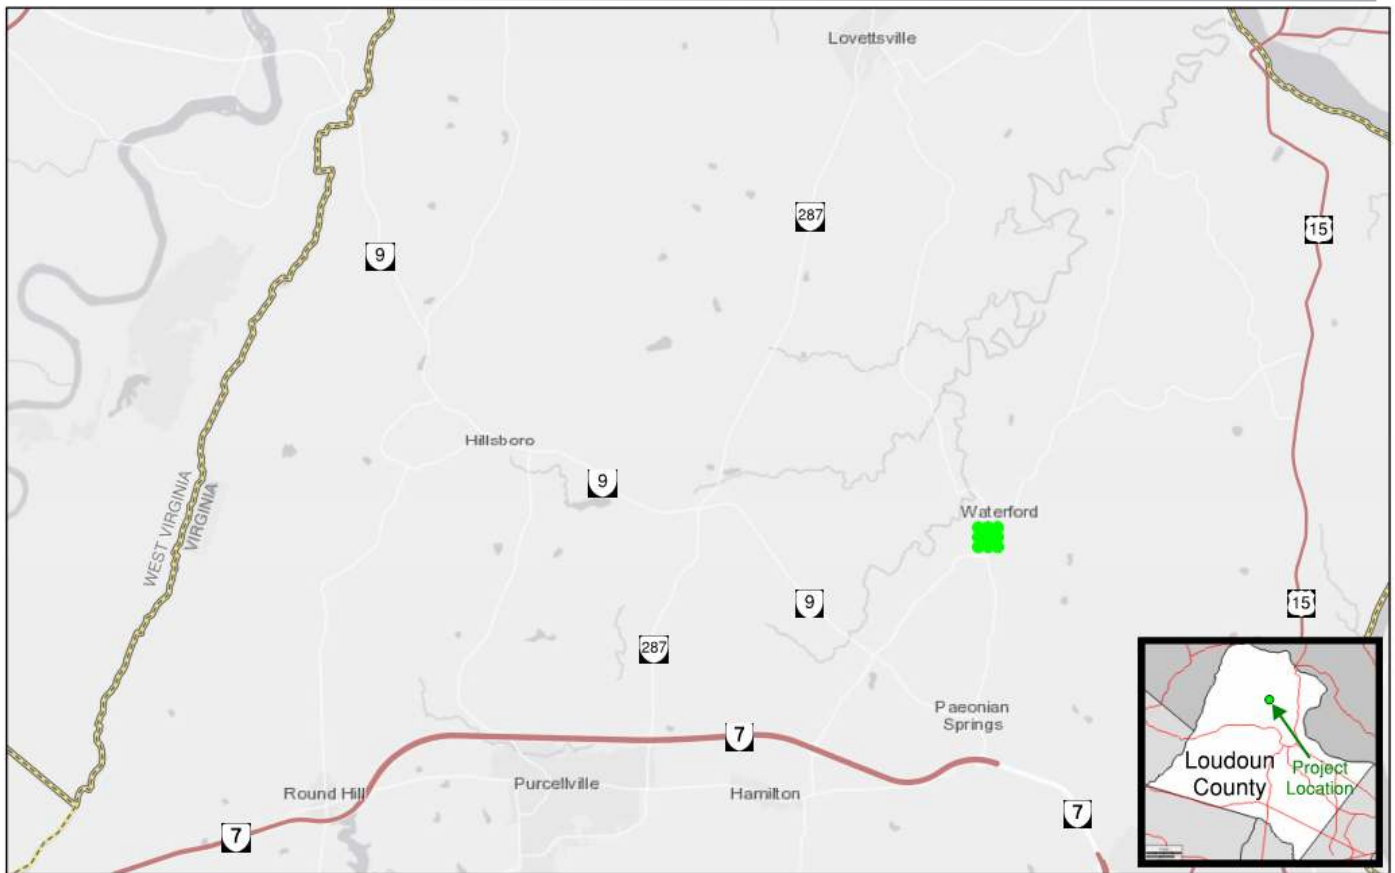

Figure 1: Village of Waterford and Surrounding Area

SUPPORTING DATA FOR VDOT'S CUT-THROUGH POLICY

The following sections provide information that is required to initiate VDOT's cut-through policy and conduct a study for potential remedies:

- Functional Classification of the street(s) in question as a local residential street and its relationship to the comprehensive plan.
- Identification of the primary use area, including all streets that are accessed primarily by using the street(s) in question and the associated peripheral roadway networks. Also, include the functional classification and relationship to the comprehensive plan for all streets in the primary use area.
- Verification by the county/town that cut-through traffic on the local residential street to be studied is 40% or more of the total one hour, single direction volume, and that a minimum of 150 cut-through trips occur in one hour in one direction. Acceptable planning techniques may be used to determine the amount of cut-through traffic. A description of the technique used should be provided to VDOT along with the vehicle volume data.
- Verification by the county/town that a petition outlining the perceived problem and signed by at least 75 percent of the total occupied households within the primary use area is valid.
- Identification of alternative route for the through traffic if travel is restricted on the street(s) in question.

Roadway Classifications

Each roadway in the Village of Waterford has a VDOT functional classification. **Table 1** shows the functional roadway classifications for streets within the Village of Waterford.

Table 1: Roadway Classification of Streets within the Village of Waterford

Road	Roadway Classification	Connection Description
High Street** (Rte 665)	Major Collector; VDOT RDM GS-3	Serves county seats and larger towns not served by the higher systems; links these areas with nearby larger town or with routes of higher classifications
Loyalty Road** (Rte 665)	Minor Collector; VDOT RDM GS-3	Accumulates traffic from local roads; provides service to small communities
Main Street** (Rte 785)		
2nd Street** (Rte 662)	Local Road; VDOT RDM GS-4	Provides access to land adjacent to the collector network
Factory Street** (Rte 662)		
Janney Street** (Rte 662)		
Old Waterford Road** (Rte 698)		
Patrick Street** (Rte 783)		
Water Street** (Rte 698)		

** Roadway has a posted speed limit of 20 MPH within the Village of Waterford

Major Collectors are typically longer in length; have lower connecting driveway densities; have higher speed limits; have higher average traffic volumes; and may have more travel lanes than minor collector roadways. Additionally, Major Collectors typically provide service to larger adjacent towns that are serviced by the larger arterial roadways in rural areas. In this instance, High Street provides service from the Village of Waterford, not directly connected to any major roadways, to Paeonian Springs, serviced by Route 9 and Route 7 a short distance away.

Minor Collectors typically aggregate traffic from the local roadways and provide service between the smaller communities. These roadways also link local traffic generators, such as housing communities and local businesses, to other portions within the locality. Loyalty Road and Main Street are the two minor collectors within the Village of Waterford and provide service to local businesses, the Waterford Elementary School, and residential properties.

Local Roads account for the largest percentage of all roadways in terms of mileage and are typically not intended for use in long distance travel. Additionally, Local Roads provide direct access to adjacent land and

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY

Remediation Request

provide service to travel over short distances as compared to collectors or other larger roadways. Any roadway not classified as a collector or higher classification is classified as a Local Road. The Local Roads shown in **Table 1** are all short distance roadways in the Village of Waterford that connect to either High Street, Loyalty Road, and/or Main Street. These roads typically service residential properties.

Church Street and Fairfax Street are other local roadways within the Village of Waterford; however, these roads are unpaved and do not provide any connectivity. Church Street can be accessed from 2nd Street and dead ends prior to connecting to High Street. Fairfax Street also has one access point from High Street and does not connect to Old Waterford Road.

These roadway classifications are required to be submitted to VDOT as supporting data for a cut-through traffic study. **Figure 2** visually shows of the roadway classifications within the Village of Waterford and how the roadways are connected to each other.

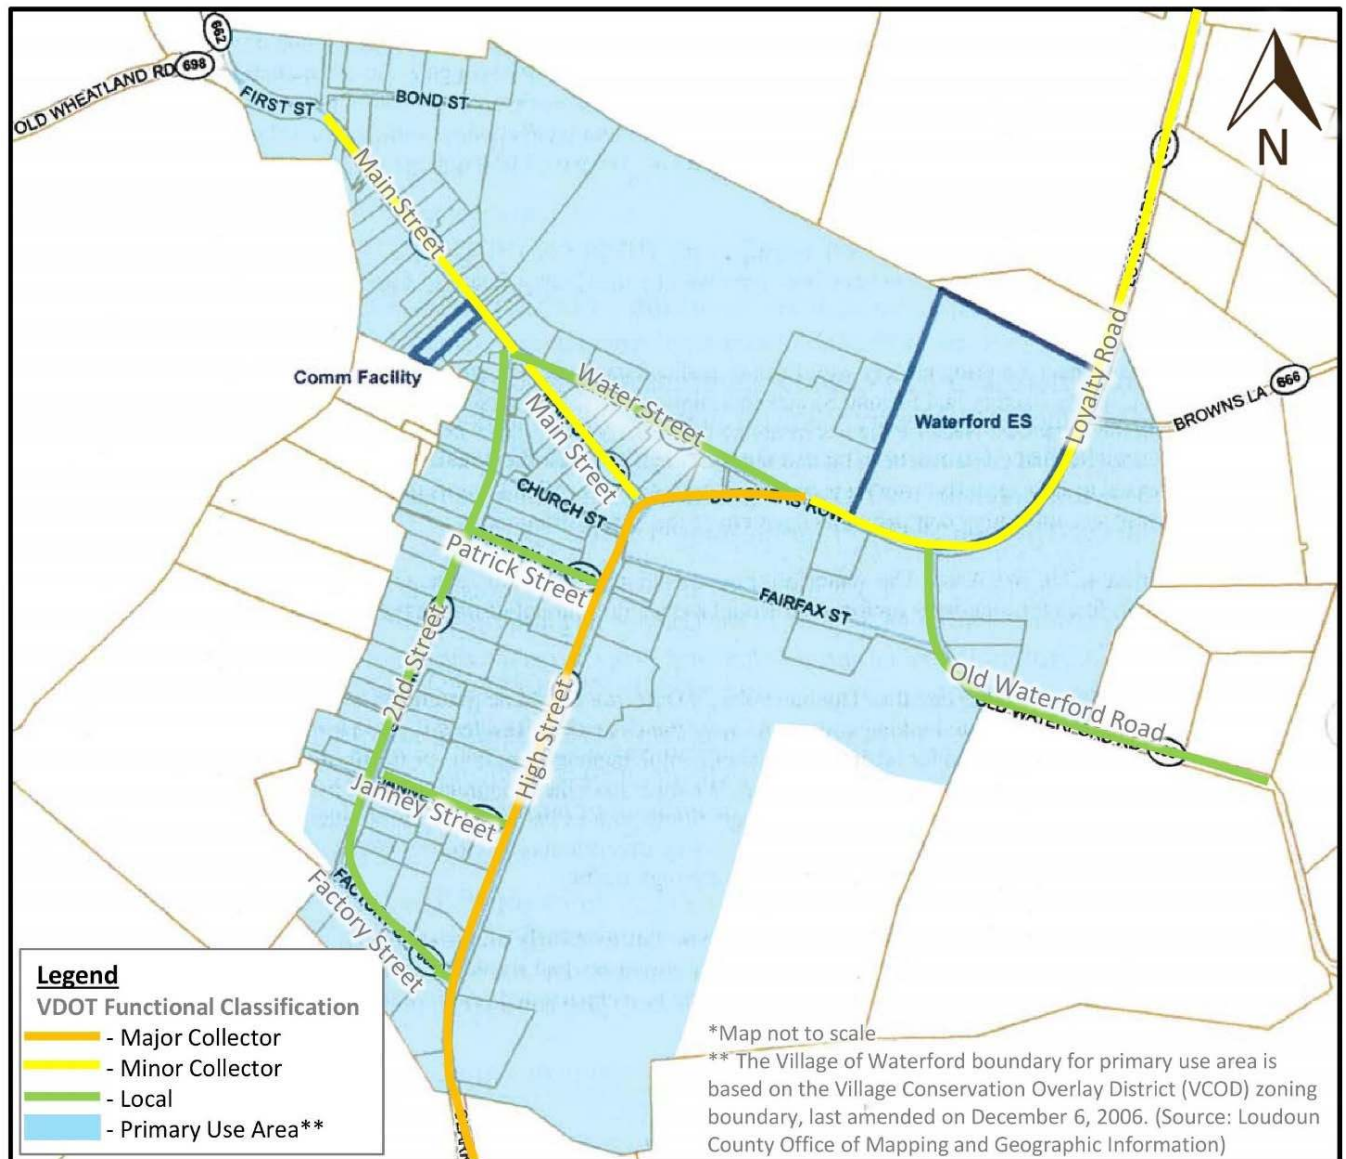

Figure 2: Map of Roadway Classifications in the Village of Waterford

Figure 3 and **Figure 4** show the typical roadway cross sections throughout the Village of Waterford. **Table 2** identifies measured roadway widths and if it is a one-way or a two-way operation. Furthermore, **Figure 5** depicts the one-way and two-way roadway operations within the Village of Waterford. Water Street measures 13 feet in width and currently operates as a two-way roadway; however, the roadway does not meet roadway width requirements for a two-way operation. Per the VDOT Road Design Manual, a GS-4 local roadway requires a minimum width of 18 feet to 24 feet, depending on the Average Daily Traffic (ADT) of the roadway.

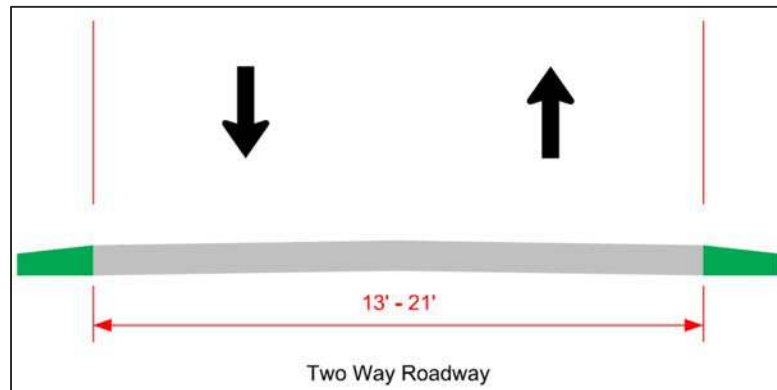

Figure 3: Typical Roadway Section for Two-Way Operations

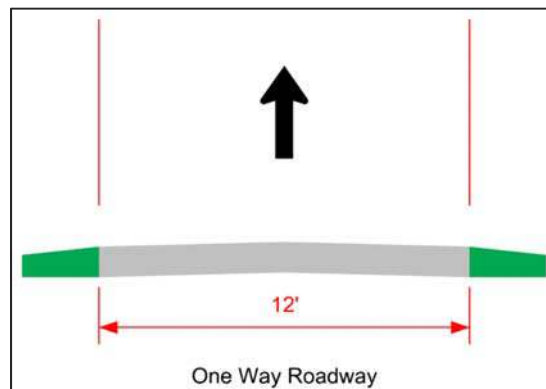

Figure 4: Typical Roadway Section for One-Way Operations

Table 2: Measured Roadway Widths in the Village of Waterford

Road	Roadway Width (ft)	Roadway Operation
High Street	18	Two-Way
Loyalty Road	21	Two-Way
Main Street	12	Westbound One-Way
Second Street	18 - 20	Two-Way
Water Street	13	Two-Way

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY Remediation Request

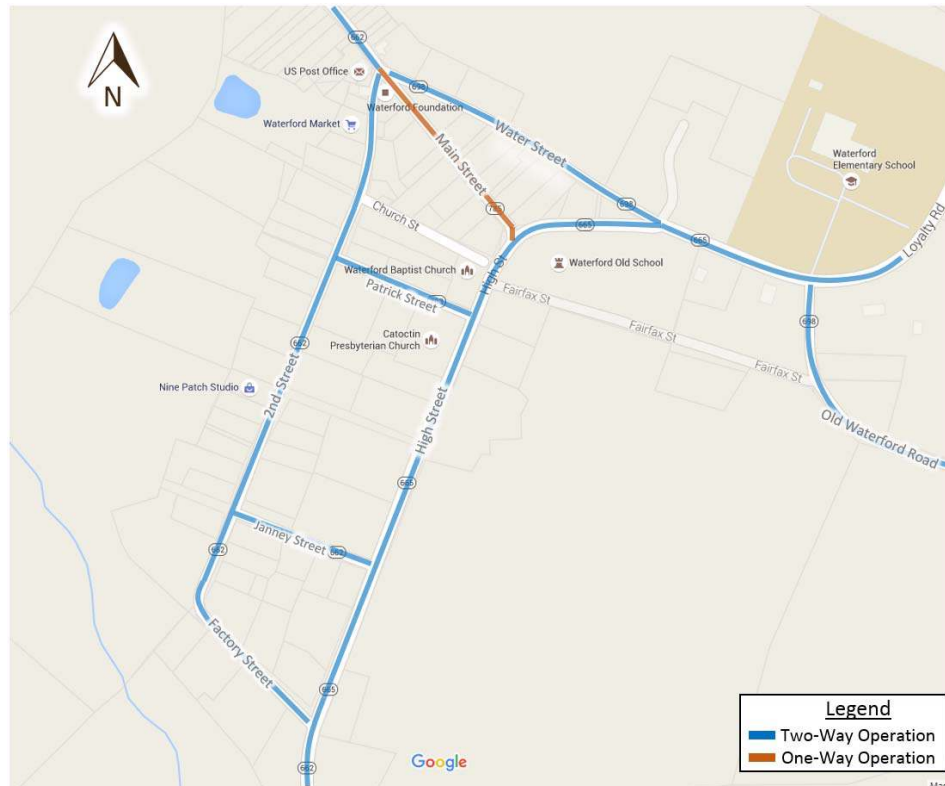

Figure 5: Roadway Operations within the Village of Waterford

Primary Use Area

The primary use area consists of the major roadways used for the cut-through traffic as well as the smaller roadways that connect to these roadways. As discussed in the previous section, there are 3 major roadways within the Village of Waterford: High Street, Loyalty Road, and Main Street.

The immediate area surrounding the Village of Waterford is the key area of concern for cut-through traffic through the Village of Waterford. **Figure 6** shows the Village of Waterford primary use area.

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY
Remediation Request

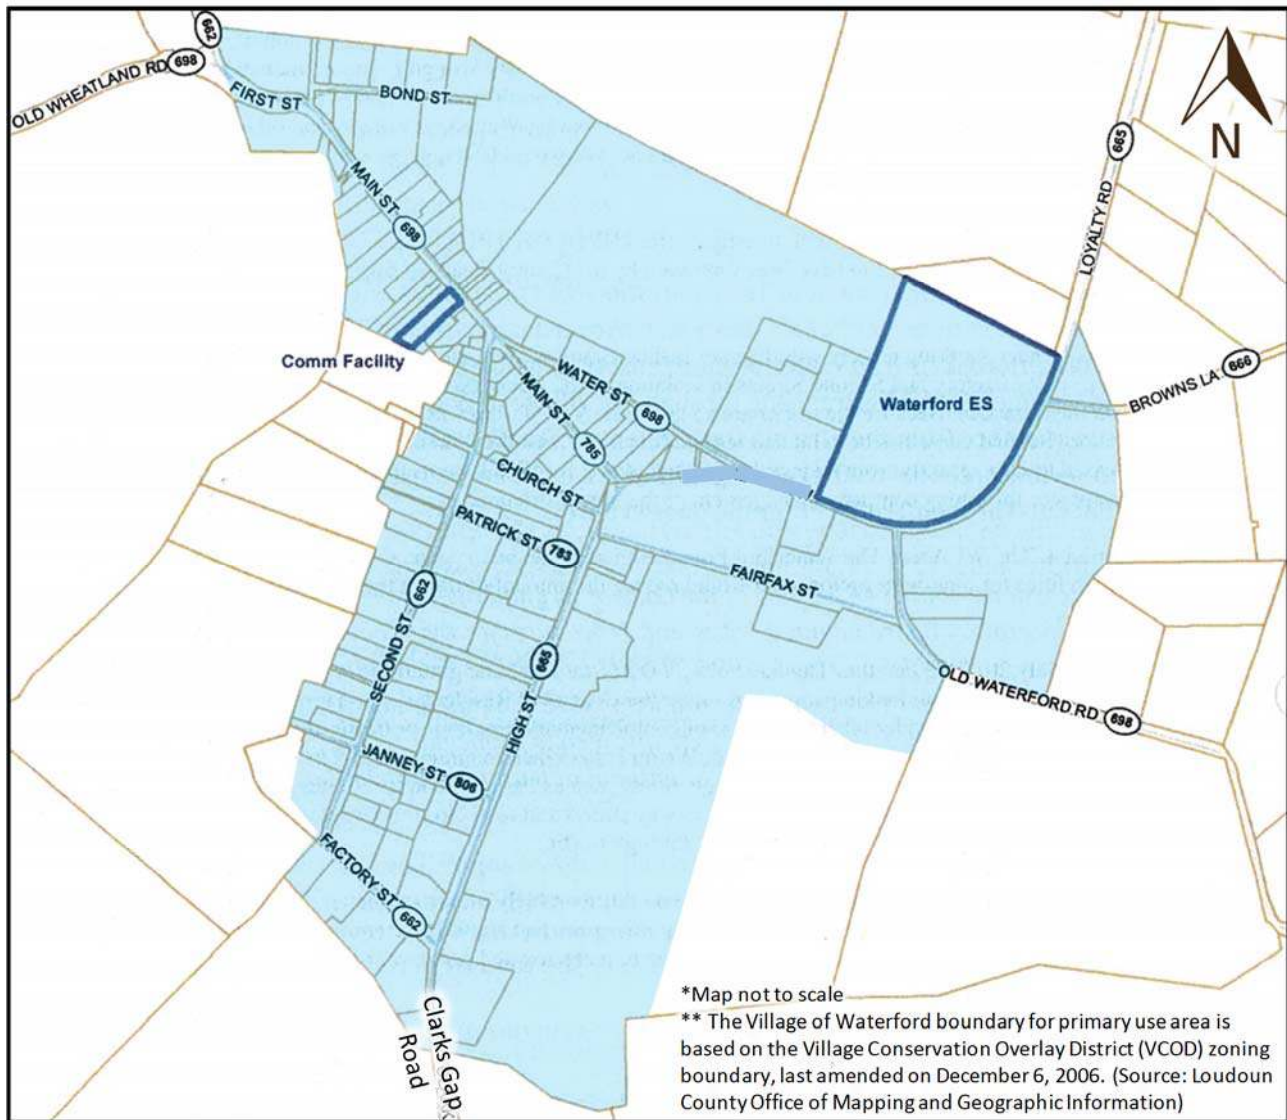

Figure 6: Village of Waterford Primary Use Area

Cut Through Volumes

The Cut-Through Policy sets a minimum of 150 vehicles must be using the local residential streets as a cut-through area. In addition to this vehicle minimum, a minimum of 40% of the traffic in one hour must be cut-through traffic in a single direction. If one hour meets these requirements, it will be documented as supporting data for a cut-through study. Through a license plate study and traffic count, it was determined that the northbound vehicles between 5 PM and 6PM meet this requirement.

A license plate study was conducted in November 2016 to assess the number of vehicles entering and exiting the primary use area. A surveillance site was established on Milltown Road approximately 6 miles north of the Village of Waterford and another site on Clarks Gap Road approximately 3 miles south of the Village. These two sites were selected because it was anticipated that most of cut-through traffic would use Milltown Road, Clarks Gap Road, and the local streets of the Village of Waterford to avoid the congested intersection of Route 287 (Berlin Turnpike) and Route 9 (Charles Town Pike). **Figure 7** shows the surveillance sites in relation to the Village of Waterford.

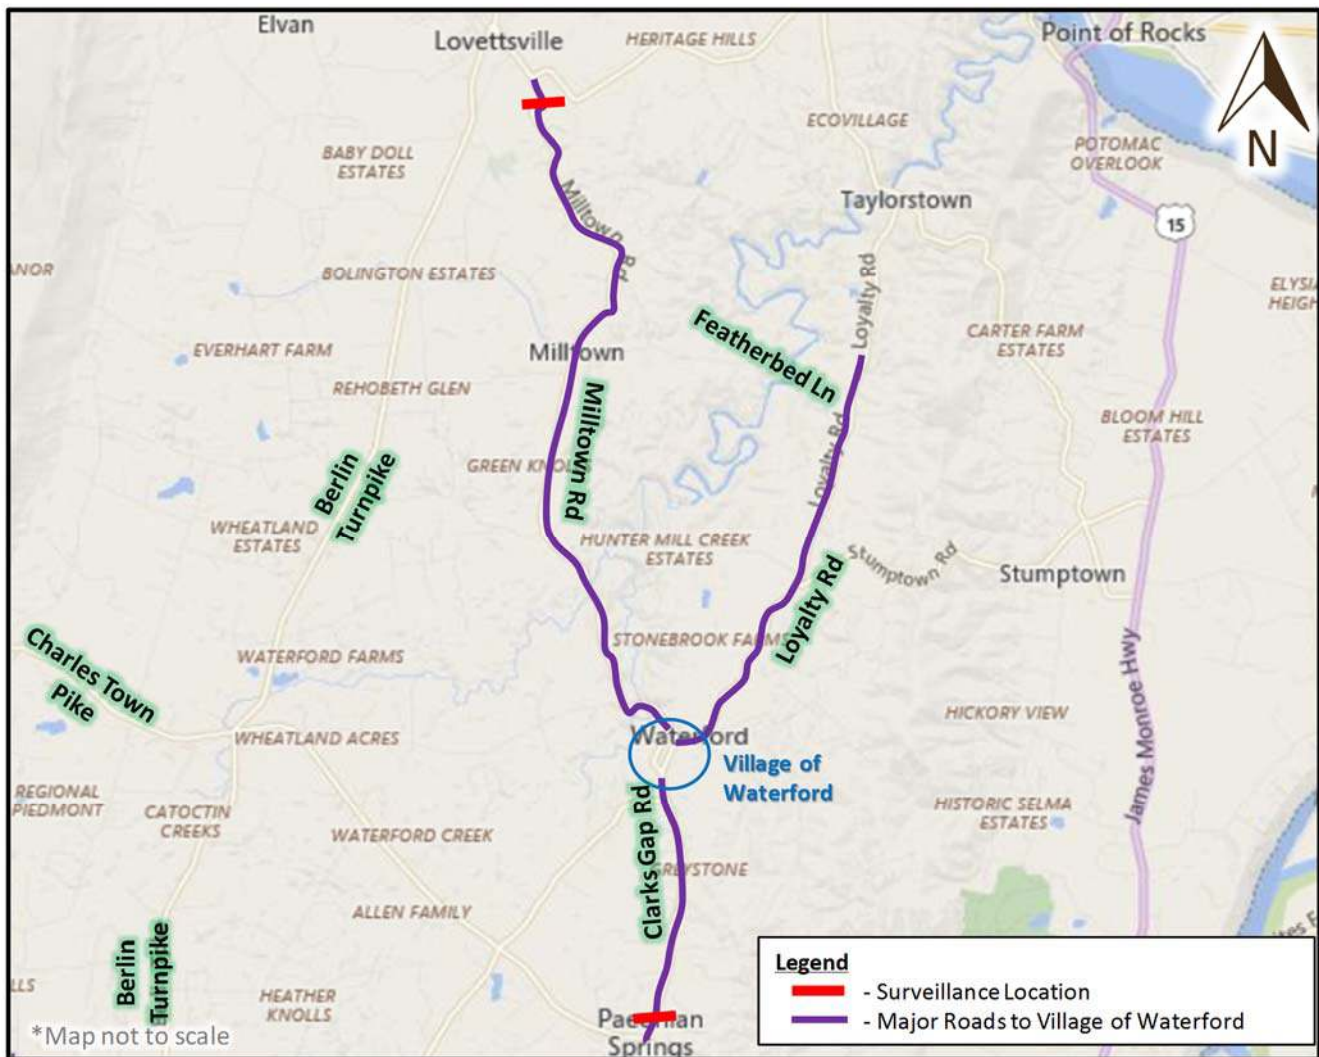

Figure 7: License Plate Surveillance Sites

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY

Remediation Request

At these surveillance sites, license plate data was collected for both directions of travel and compared between the two locations. Matching license plates between the two sites during the same peak period and direction of travel indicated that the vehicle used the primary use area as a cut-through route.

Loyalty Road did not receive a surveillance site in this study since the Cut Through Policy evaluates vehicles using local residential streets in the study area. Vehicles traveling on Loyalty Road will not use any local residential streets to access Clarkes Gap Road. Thus, Loyalty Road was excluded from the license plate study.

In addition to the license plate study, a turning movement count was conducted during the peak AM and PM period in November 2016 to determine the traffic volumes using the primary use area. **Figure 8** shows the volumes at each intersection within the Village of Waterford. These volumes can be found in **Appendix A**. Also, 24-hour traffic volumes along with the vehicle speed data were collected on all the roadways within the primary use area and utilized to perform speed analysis that is discussed in the latter sections of this report.

These traffic volumes help determine the percentage of vehicles that are using the Village of Waterford as a cut-through route. **Figure 9** and **Figure 10** show the AM and PM peak hour with the largest cut-through traffic, which is based on the license plate study, as well as the total traffic volume for each direction. The total traffic volume is shown to help determine the percentage of cut through traffic.

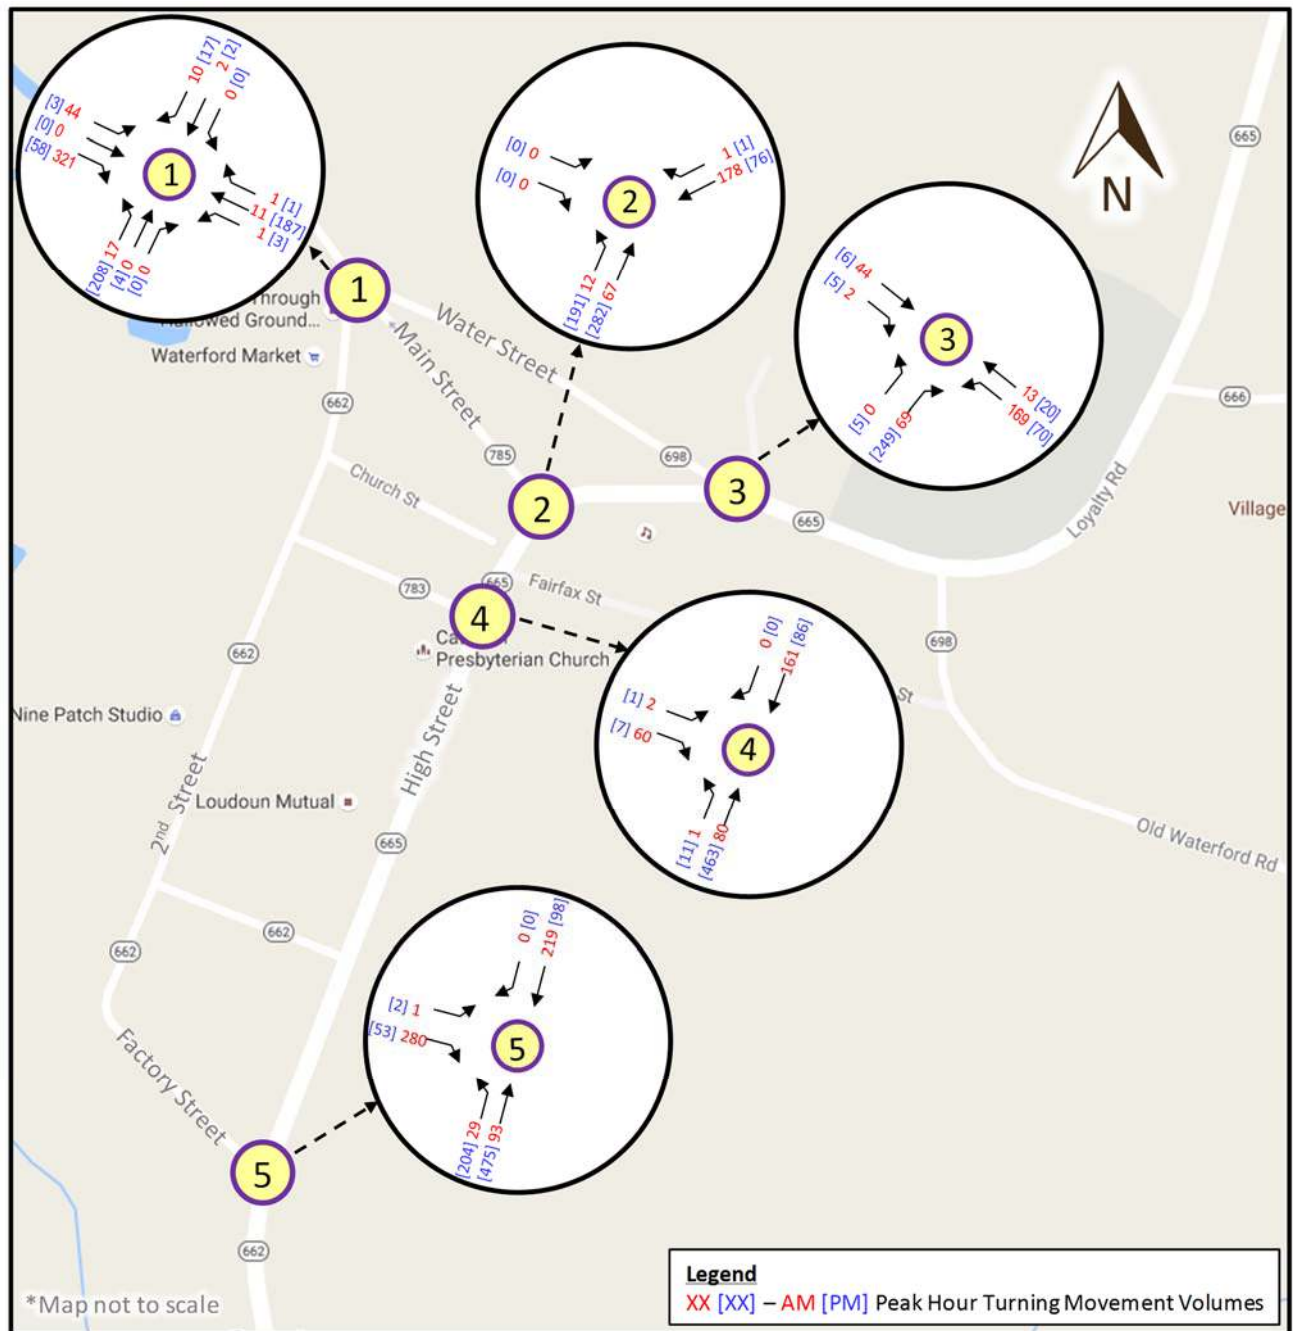

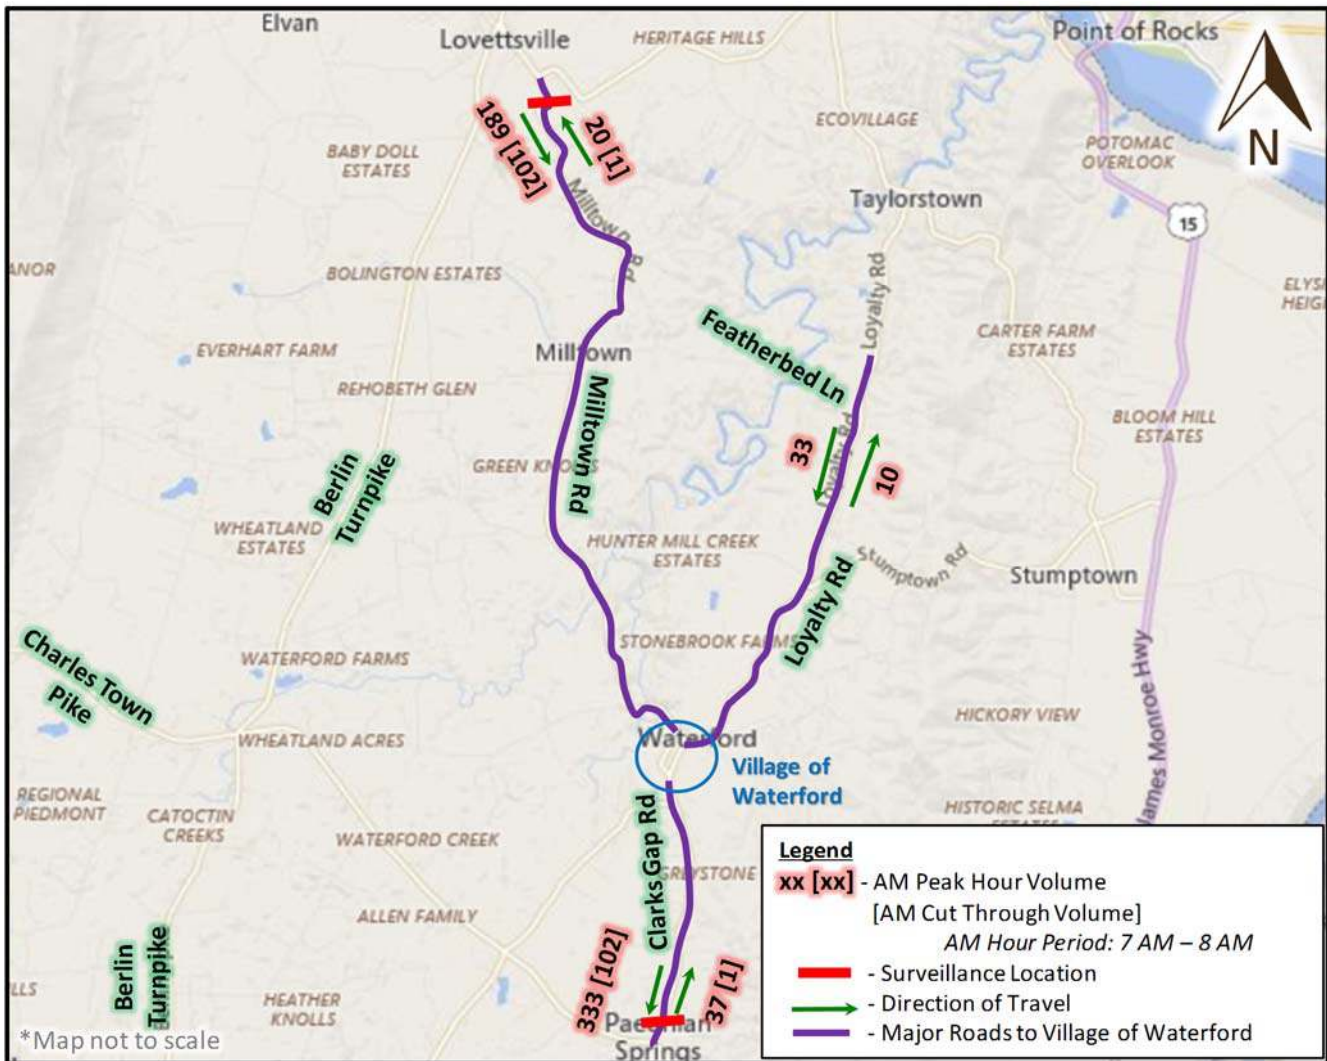

Figure 8: Turning Movement Counts in the Village of Waterford

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY Remediation Request

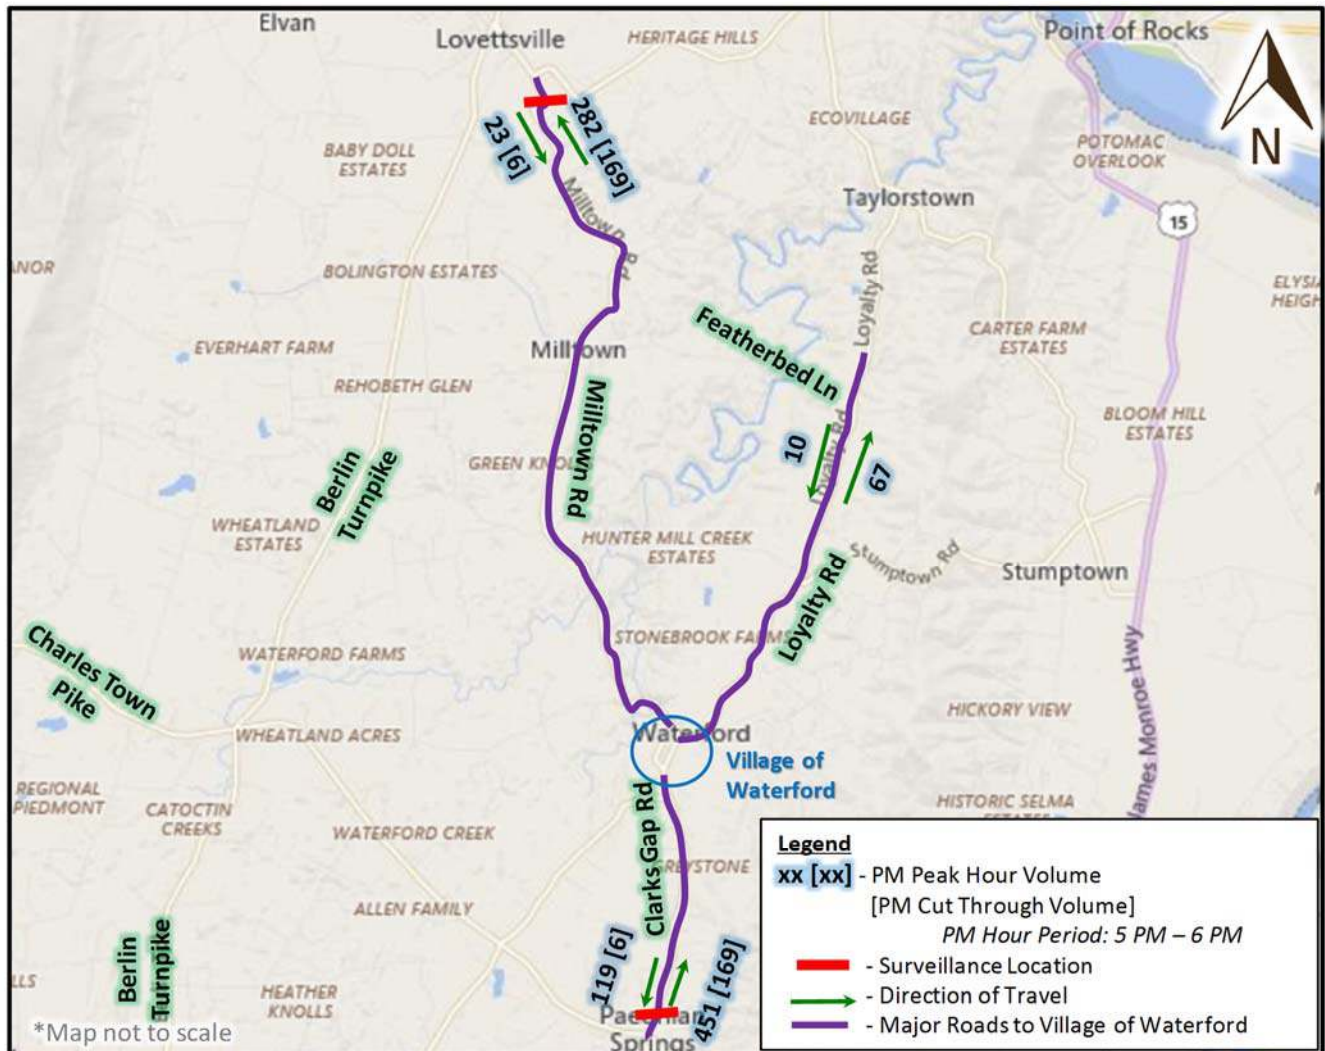

AM Peak Hour Cut Through Traffic Summary	AM Peak Hour Origin – Destination: Vehicle License Plate Match (based on License Plate Survey)			
	Surveillance Location	Destination	Clarks Gap Rd - Southbound	Milltown Rd - Northbound
	Origin			
	Milltown Rd - Southbound		102 veh (31 %)	
	Clarks Gap Rd - Northbound			1 veh (0 %)

Figure 9: AM Peak Hour Cut-Through Volumes

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY Remediation Request

PM Peak Hour Cut Through Traffic Summary	PM Peak Hour Origin – Destination: Vehicle License Plate Match (based on License Plate Survey)			
	Surveillance Location	Destination	Clarks Gap Rd - Southbound	Milltown Rd - Northbound
	Origin			
	Milltown Rd - Southbound		6 veh (6 %)	
	Clarks Gap Rd - Northbound			169 veh (60 %)

Figure 10: PM Peak Hour Cut-Through Volumes

The percentage of cut-through traffic and the total cut-through volume is shown in **Figure 9** and **Figure 10**. The required threshold set forth by VDOT's Cut-Through Policy is a minimum of 150 vehicles using the primary use area and at least 40% of traffic in a single direction must be cut-through traffic for a one-hour period. The traffic volume heading northbound between 5 PM and 6 PM meets this requirement.

Community Petition

The Cut-Through Policy states that a petition outlining the perceived problem with signatures of at least 75 percent of the occupied households must be valid. Currently, no formal petition has been signed; however, the Waterford Citizens Association has expressed the speed and volume concerns since the late 1990's. Additionally, the WCA has conducted an informal rush hour traffic study and submitted it to Loudoun County.

Given the involvement of the WCA, it is clear the Association is aware of the issue and has worked with Loudoun County in the past to get VDOT approval for measures to mitigate speed and traffic volume through the Village of Waterford.

Alternative Routes

There are very few alternative routes around the local residential streets within the Village of Waterford, given the rural context of the surrounding area. As a result, the alternatives listed below were identified to address the cut-through traffic concerns.

- Alternative 1 – Signing and enforcement on local streets
- Alternative 2 – Time based roadway restrictions and enforcement
- Alternative 3 – Cul-de-sac Factory Street
- Alternative 4 – New road alignment (bypass)

The respective planning level costs, developed using the VDOT 2015 TMPD (Transportation & Mobility Planning Division) Cost Estimating spreadsheet for Alternative 4, are summarized in **Table 3**. The costs have been inflated to 2018 and include right-of-way, construction, utility relocation, and engineering design costs. The right-of-way and utility costs are assumed to be 40% of the construction cost, while engineering design costs are assumed to be 25% of the construction cost. These values have been added to the construction cost to determine the planning level costs shown in the table below.

In all cases, it is recommended that Water Street be converted to an eastbound one-way operation due to the existing roadway width. Consideration should be given to reclassifying Water Street from a local road to a minor collector. In conjunction with the evaluated alternatives, traffic will be diverted from local roadways onto collector roads. If Water Street is intended to remain a two-way operation, the roadway will need to be widened.

Table 3: Planning Level Cost of Alternatives

Alternative	Planning Level Cost*
1	\$7,500
2	\$400 / Day (\$12,500 Initial Cost)
3	\$90,000
4A	\$8,000,000
4B	\$10,700,000
4C	\$5,500,000
4D	\$5,300,000

*Excludes environmental and historical study costs

Alternative 1

Alternative 1 will provide “No Thru Traffic” signs on local streets followed by periodic enforcement. These signs will be installed on 2nd Street, Factory Street, Janney Street, and Patrick Street. Discouraging through traffic with signs and enforcement might reduce the cut through traffic on these streets but will likely not eliminate cut through concerns entirely. The advantage of this alternative is it can be implemented in the short term, at a minimal cost, and in conjunction with other alternatives.

Alternative 2

Alternative 2 will implement time-based roadway restrictions on local streets within the Village of Waterford. This is intended to keep vehicles on roadways with a higher roadway classification, specifically High Street, Main Street, and Loyalty Road. The entrances to the local streets will be blocked and traffic restrictions will be enforced by police. These restrictions will be in place during the peak hours. **Figure 11** and **Figure 12** show the proposed roadway restrictions during each peak hour and the expected travel routes through the Village of Waterford. Moreover, signing will be installed on 2nd Street, Factory Street, Janney Street, and Patrick Street to inform drivers of the time-based roadway restrictions.

During the AM peak hour, roadway restrictions will be placed on 2nd Street to prevent southbound vehicles from using local streets. Southbound vehicles will use Water Street to access High Street and continue south. Consideration should be given to reclassifying Water Street to a minor collector.

In the PM peak hour, roadway restrictions will be placed on Factory Street, Janney Street, and Patrick Street. This will prevent northbound vehicles from using these roadways to access 2nd street and ultimately Main Street on the northern portion of the Village. Northbound vehicles will use Main Street to continue northbound.

This alternative can be implemented in the short term and at a minimal cost. No major improvements will be necessary to the existing roadway network in the Village of Waterford; however, Water Street will likely be classified as a collector with the increased traffic volumes on the roadway. If Water Street is intended to remain a two-way roadway operation, the roadway should be widened to meet the minimum width requirements.

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY Remediation Request

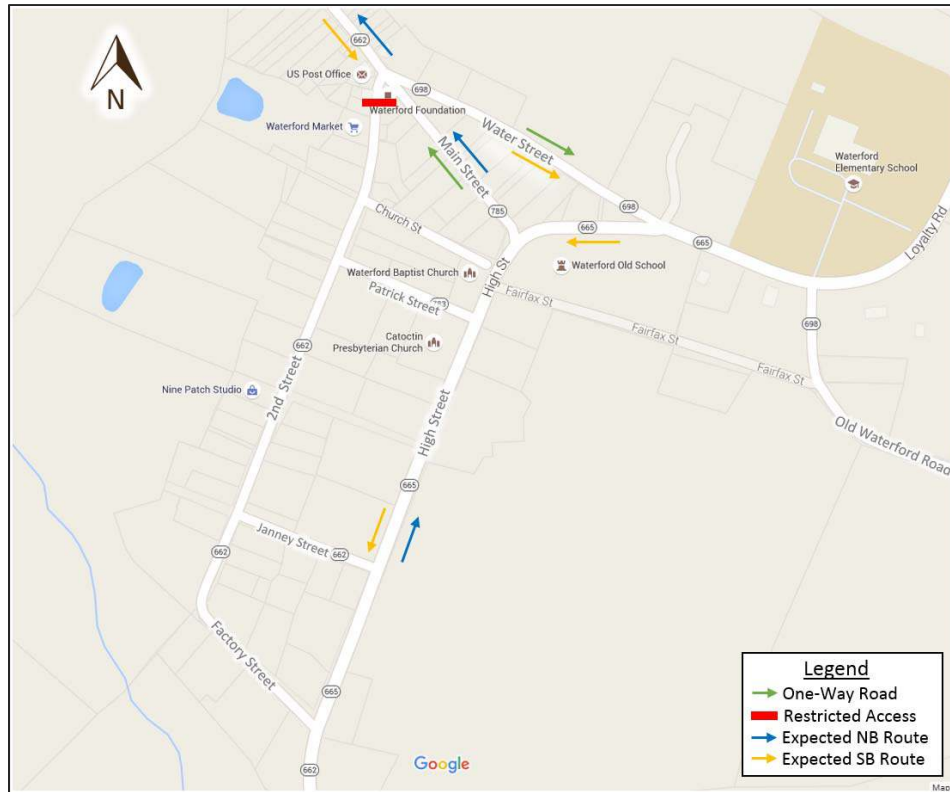

Figure 11: Alternative 2 – AM Peak Hour Roadway Restrictions

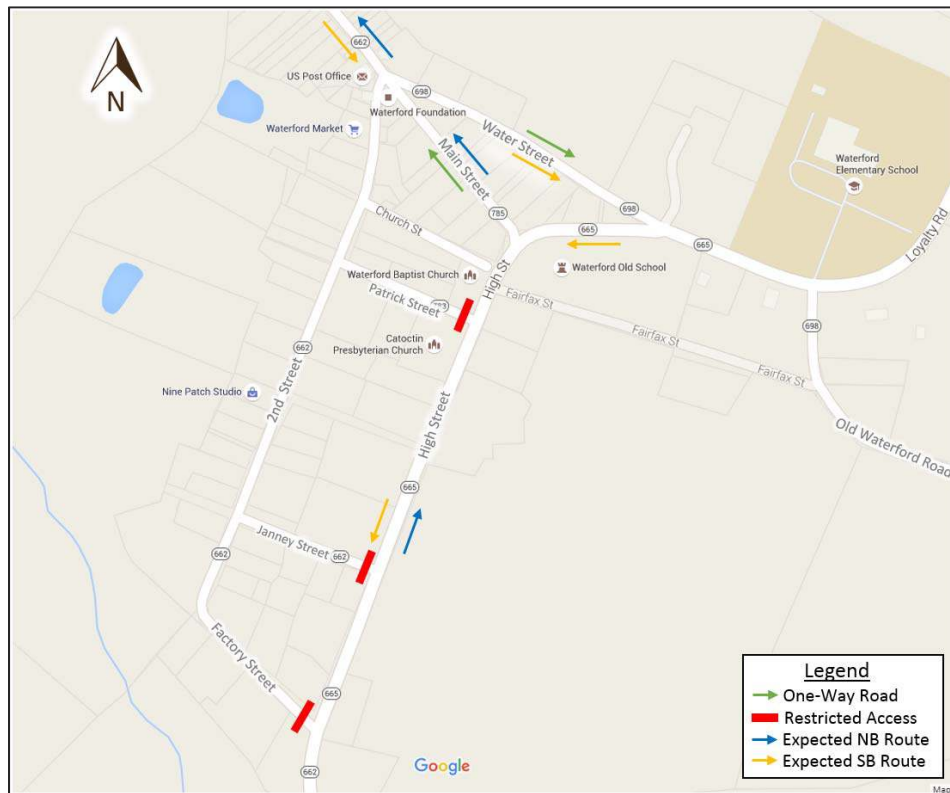

Figure 12: Alternative 2 – PM Peak Hour Roadway Restrictions

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY Remediation Request

Alternative 3

Alternative 3 will cul-de-sac Factory Street to physically prevent vehicles from using Factory Street and 2nd Street between High Street and Water Street. Factory Street would cul-de-sac just prior to High Street. It will be important to coordinate with Emergency Services to determine any impacts. In addition, it is possible that motorists will use Janney Street or Patrick Street as a connection between 2nd Street and High Street, thus minimizing the benefits of the cul-de-sac. This alternative is shown on **Figure 13** and can be implemented in the short term, at a minimal cost, and in conjunction with Alternative 1 or Alternative 2.

Implementing cul-de-sac to meet the turning requirements for a passenger vehicle requires a cul-de-sac with a 60-foot diameter. This requirement is outlined in the American Association of State Highway and Transportation Officials (AASHTO) 'A Policy on Geometric Design of Highways and Streets'. This will affect approximately 3 residential properties along Factory Street.

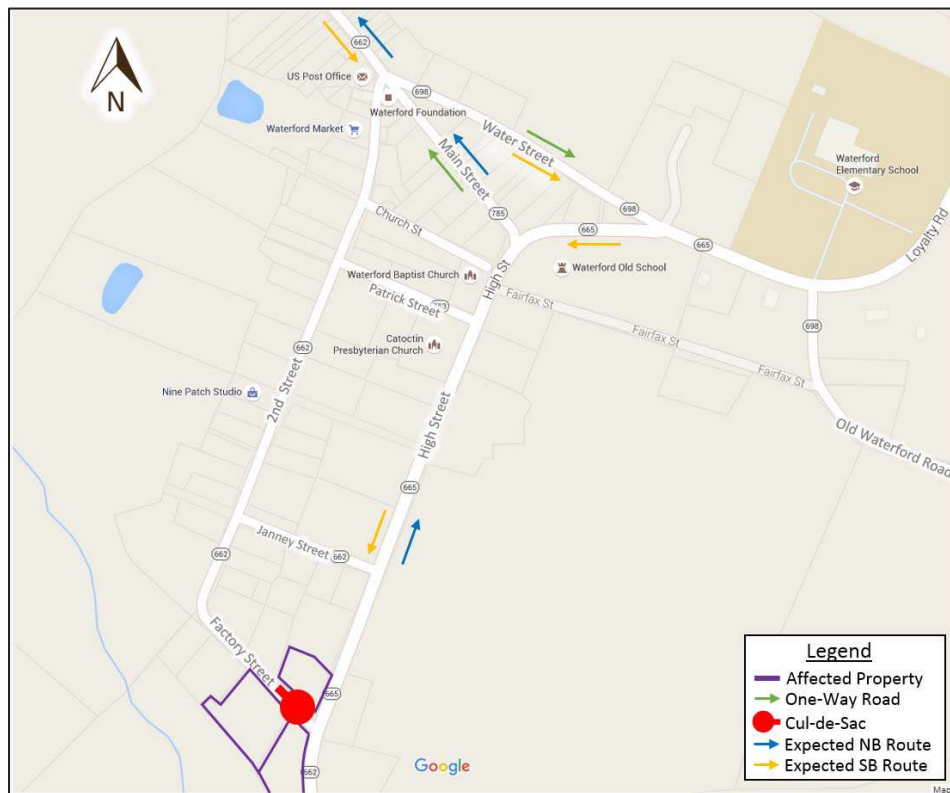

Figure 13: Alternative 3 – Cul-de-sac Factory Street

Alternative 4

Alternative 4 will provide a new road that will serve as a bypass around the Village of Waterford. This is a long term improvement and should only be considered after thorough investigation of alternatives 1-3 above. A new road alignment will trigger a comprehensive environmental study by which alternative alignments will be identified and evaluated for benefits, costs, and impacts. For purposes of developing general order-of-magnitude costs, several alternative alignments (A-D) have been identified and a planning level cost for each has been developed. The cost of the environmental study was not included. **Figure 14** through **Figure 17** illustrate the alignments.

In addition to the above alternatives, Loudoun County has allocated funds for the design of a roundabout at the intersection of Route 9 (Charles Town Pike) and Route 287 (Berlin Turnpike) in the previous years. The County's Capital Improvement Programs (CIP) for FY 2019 – FY 2014 identifies additional dollars to be allocated via general obligation funds in the November 2019 referendum for acquisition and construction, assuming the residents of Loudoun vote for the roundabout. Route 287 and Route 9 provide a parallel path to the west of the Village of Waterford between Lovettsville and Paeonian Springs. For motorists traveling between these two points, cutting through the Village of Waterford may seem like a reasonable alternative to avoid the severe congestion that the intersection of Route 9 and Route 287 currently experiences during the peak periods. The construction of a roundabout at this intersection could significantly reduce delays and improve travel times on Route 287 and Route 9, thereby eliminating the need for motorists to divert through the Village of Waterford. Construction of the roundabout is currently planned to begin in 2020, if the project funds are allocated in the 2019 referendum.

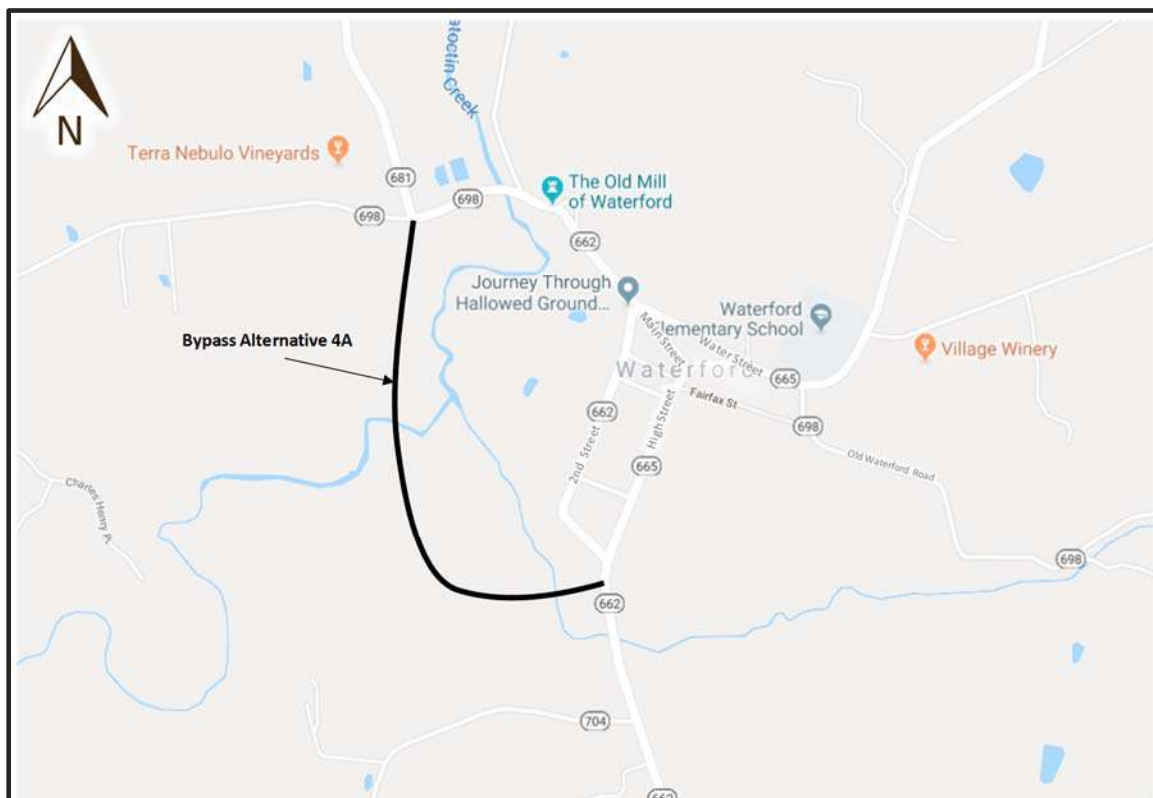

Figure 14: Alternative 4A – New Road Alignment Bypass

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY Remediation Request

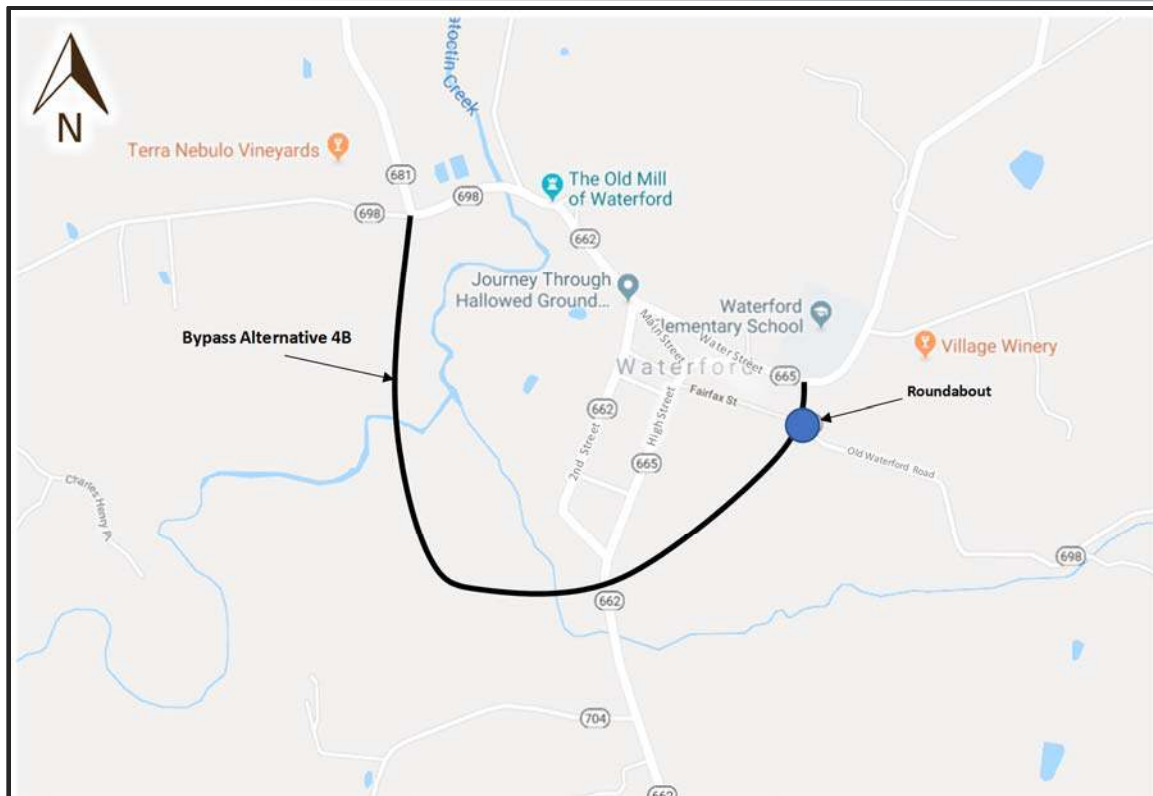

Figure 15: Alternative 4B – New Road Alignment Bypass

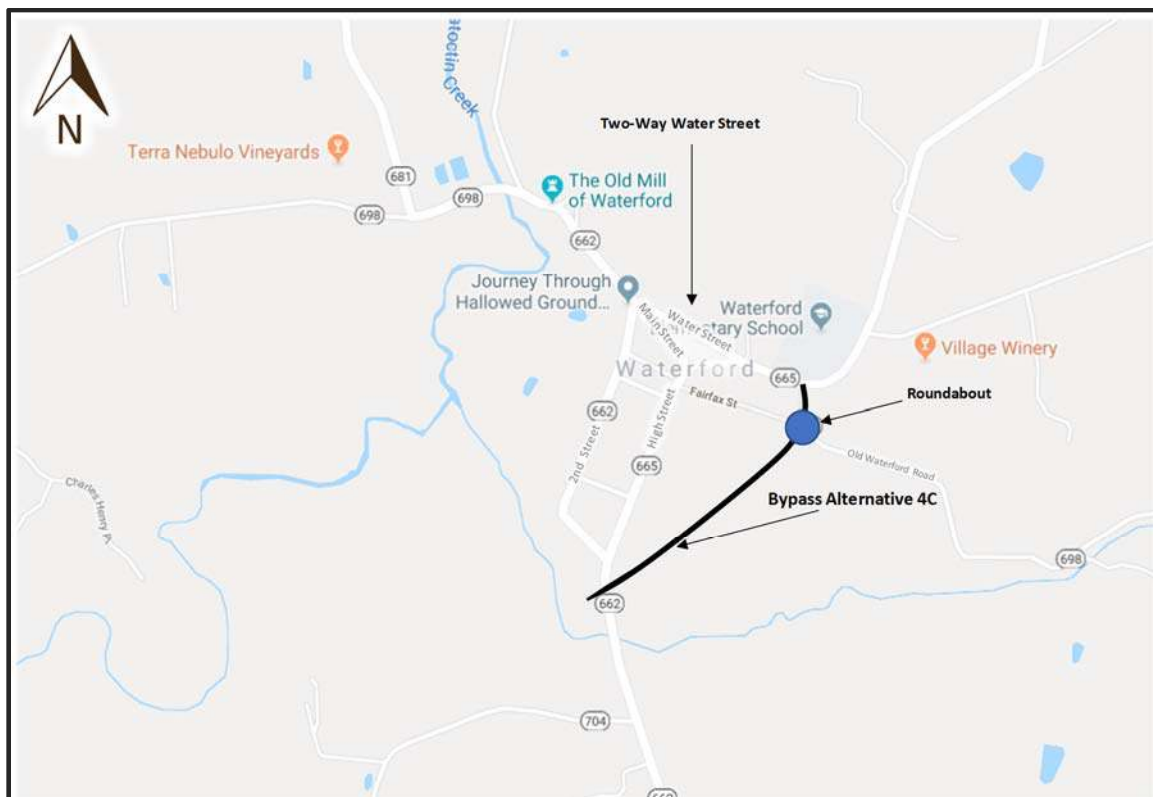

Figure 16: Alternative 4C – New Road Alignment Bypass

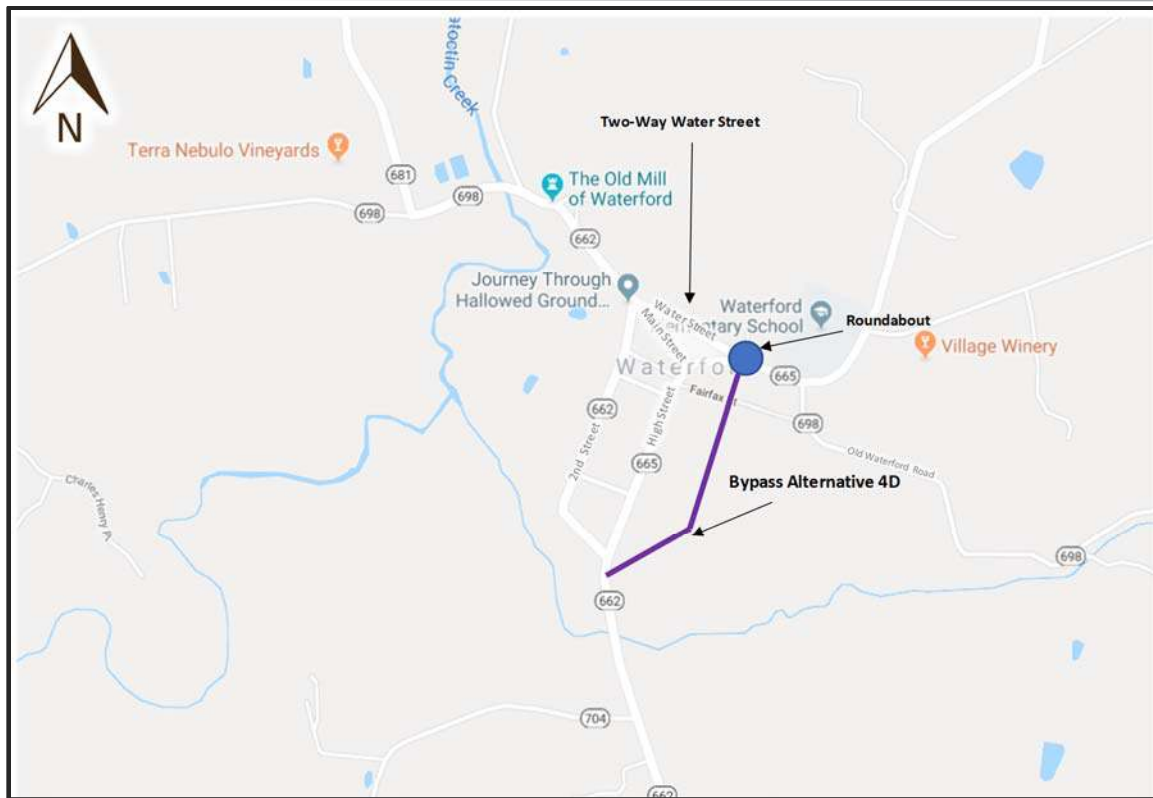

Figure 17: Alternative 4D – New Road Alignment Bypass

Additional Alternatives:

An alternative to widen Water Street to accommodate two-way traffic and provide a roundabout at the intersection of High St/Water St/Loyalty Rd was considered for a mid-term solution. This alternative would also close Main Street access south of Water Street to prevent through traffic. The roundabout will improve the turning movement geometrics and general operations to provide a more attractive alternative for northbound motorists currently using Main Street or 2nd Street.

This alternative was dismissed due to the larger impacts to adjacent properties on Water Street and at the High St/Water St/Loyalty Rd intersection. These impacts include right-of-way and potential utility relocation costs for the widening of Water Street and the construction of a roundabout.

VEHICLE SPEED ANALYSIS

The Village of Waterford has approached Loudoun County with concerns on high speed vehicles, which are typically vehicles that travel at a speed 10 MPH over the 20 MPH posted speed limit. The posted speed limit is higher outside the primary use area. A speed study was conducted over a 24-hour period in November 2016 to determine the speeds of vehicles through the Village of Waterford. In addition to a speed study, the daily traffic volumes were also calculated. **Figure 18** shows the daily traffic volumes in the Village of Waterford, while **Figure 19** shows the posted, average, and 85th percentile speeds. The average speed is calculated using all vehicles captured in the 24-hour period. The 85th percentile speed captures 85% of all vehicles traveling between 0 MPH and the reported 85th percentile speed. Only 15% of all vehicles in the count operate above the 85% percentile speed. **Appendix B** includes the speed analysis graphs and 24-

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY Remediation Request

hour speed data for all locations. **Table 4** summarizes the speed data, which includes 85th percentile speeds, average speeds, and the 10 MPH pace. The 10 MPH pace is the speed range that includes a majority of the observed vehicles.

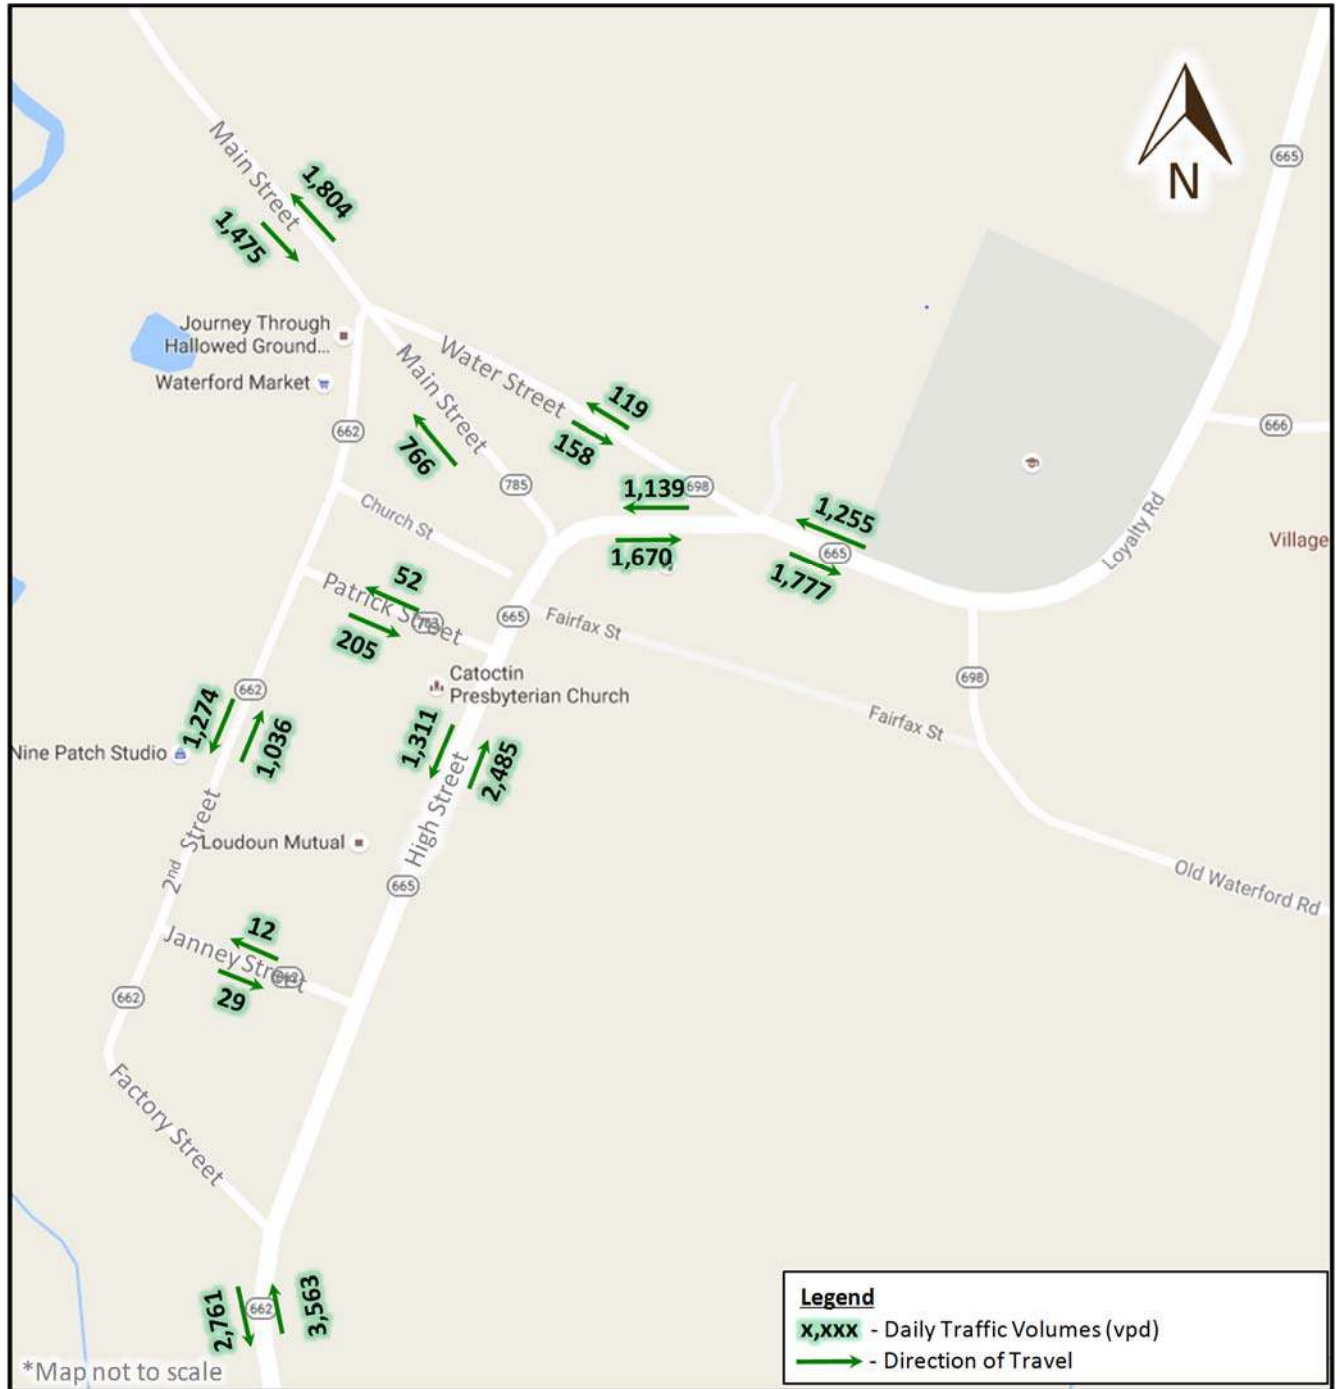

Figure 18: Daily Traffic Volumes in the Village of Waterford

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY Remediation Request

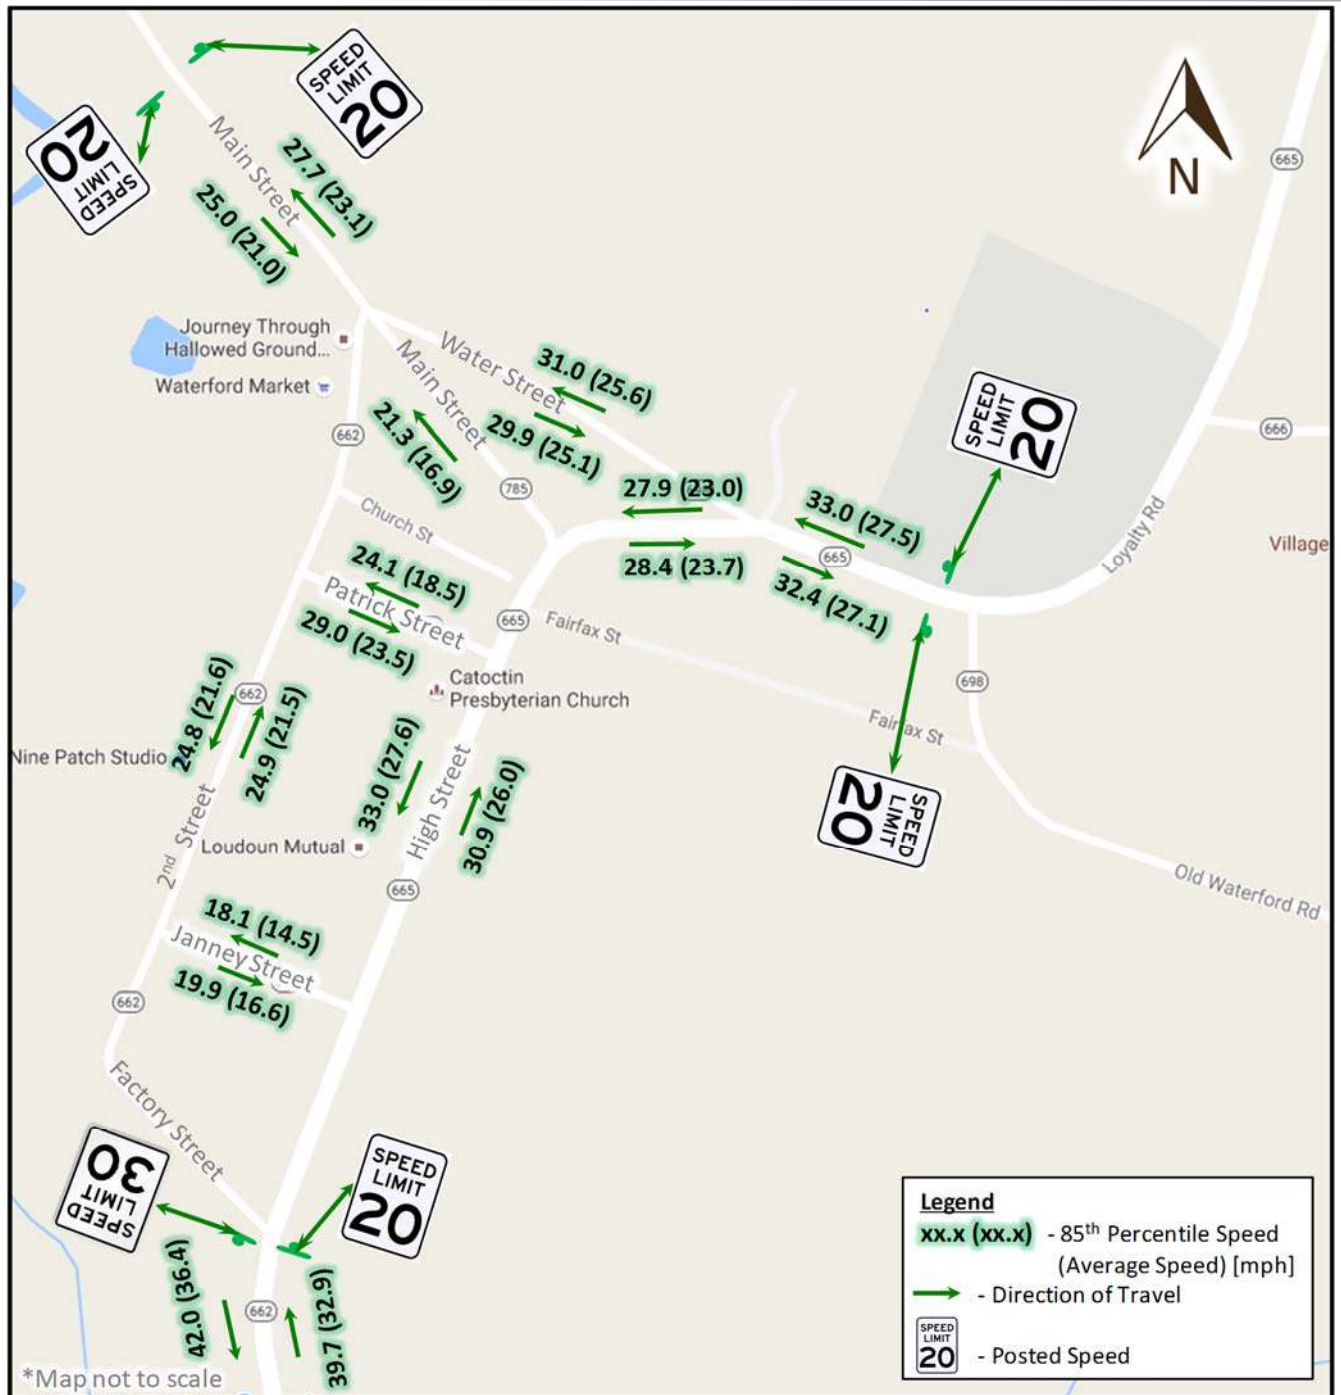

Figure 19: 85th Percentile and Average Speeds

VILLAGE OF WATERFORD CUT THROUGH TRAFFIC STUDY

Remediation Request

Table 4: Summarized Speed Data

Roadway	Direction	Posted Speed (MPH)	85th Percentile Speed (MPH)	Average Speed (MPH)	10 MPH Pace
Main St	Eastbound (W of Water St)	20	25.0	21.0	15-24
	Westbound (W of Water St)	20	27.7	23.1	20-29
	Westbound (E of Water St)	20	21.3	16.9	10-19
Water St	Eastbound	20	29.9	25.1	20-29
	Westbound	20	31.0	25.6	20-29
High St	Eastbound (E of Main St)	20	28.4	23.7	20-29
	Westbound (E of Main St)	20	27.9	23.0	20-29
	Northbound (W of Main St)	20	30.9	26.0	20-29
	Southbound (W of Main St)	20	33.0	27.6	20-29
Loyalty Rd	Eastbound	20	32.4	27.1	20-29
	Westbound	20	33.0	27.5	20-29
Patrick St	Eastbound	20	29.0	23.5	20-29
	Westbound	20	24.1	18.5	10-19
2nd st	Northbound	20	24.9	21.5	15-24
	Southbound	20	24.8	21.6	15-24
Janney St	Eastbound	20	19.9	16.6	10-19
	Westbound	20	18.1	14.5	10-19
Clarks Gap Rd	Northbound	30	39.7	32.9	30-39
	Southbound	30	42.0	36.4	30-39

Based on the observed 85th percentile speeds, vehicles are traveling 10 MPH over the posted speed limit (shown as red in **Table 4**) on some roadways within the Village of Waterford. The roadways that experience higher speeds are the roadways that lead into/out of the Village, primarily High Street, Loyalty Road, and Clarks Gap Road. Westbound vehicles on Water Street are also traveling at higher speeds. These vehicles are likely coming from Loyalty Road and continue traveling at the 30 MPH speed limit outside of the Village of Waterford. Per the VDOT Traffic Calming Guide for Neighborhood Streets, local roadways experiencing 85th percentile speeds 10 MPH over the posted speed limit can qualify for traffic calming measures.

Traffic calming measures are already in place to address vehicle speeds. These measures include additional stop signs and trees, a \$200 speeding fine program, and 'Watch for Children' sign installations. **Figure 20** depicts an additional sign added to the speed limit signs throughout the Village. Additional measures on High Street, Loyalty Road, Water Street, and Clarks Gap Road will need to be coordinated between the Village of Waterford, Loudoun County, and VDOT.

Figure 20: Speeding Fine Program Signs

CONCLUSION

The data presented in this document investigated the required information set forth by VDOT's Cut-Through policy to initiate a study for the Village of Waterford and explored vehicle speeds within the Village. This information is intended for evaluation and determining the remediation options and studies for the Village of Waterford.

The VDOT's Cut-Through policy requires a submittal of relevant information to begin a traffic study for potential remedies for cut-through traffic. The information for VDOT review included a primary use area, roadway classifications of all roadways in the associated primary use area, a community petition, minimum vehicular volume of cut-through vehicles, and potential alternative routes for cut-through traffic. All this information has been presented in this document except for a community petition. Currently, there is no official community petition in place; however, Loudoun County is working with the community to complete it.

The roadway classification and primary use area was defined and the cut-through volumes were analyzed. The threshold of 150 cut-through vehicles and 40% cut-through traffic has been met for 1 hour through the Village of Waterford in the northbound direction. As part of the requirements to the cut-through policy, alternative routes were to be explored and feasible existing alternative routes were limited. As a result, several alternative improvements, including new alignments, were identified and are listed below.

- Alternative 1 – Signing and enforcement on local streets
- Alternative 2 – Time based roadway restrictions and enforcement
- Alternative 3 – Cul-de-sac Factory Street
- Alternative 4 – New road alignment (bypass)

In addition to the above alternatives, Loudoun County has identified funds for the design of a roundabout at the intersection of Route 9 (Charles Town Pike) and Route 287 (Berlin Turnpike) in the County's Capital Improvement Program (CIP). Construction of the roundabout is currently planned to begin in 2020, if the project funds are allocated in the 2019 referendum. The construction of a roundabout at this intersection could significantly reduce delays and improve travel times on Route 287 and Route 9, thereby eliminating the need for motorists to divert through the Village of Waterford. Following completion, the cut-through traffic volumes through the Village of Waterford can be reassessed to determine if the roundabout provided adequate relief to the cut-through issue that the Village is currently experiencing.

A vehicle speed analysis was conducted using 24-hour speed count in November 2016 to determine any vehicle speed issues through the Village. The average and 85th percentile speeds were determined and compared to the posted speed limit within the Village. Typically, vehicles traveling 10 MPH over the posted speed limit are considered high speed vehicles. Through the speed count, it was concluded that the 85th percentile speeds may qualify High Street, Loyalty Road, Water Street, and Clarkes Gap Road for additional traffic calming measures. No additional traffic calming measures are currently anticipated or recommended.
